

GUNJAN KUMAR

Bihar, India | +91 9905234090 | ygunjankumar3@gmail.com | github.com/gunjan4527 | linkedin.com/in/gunjan9905 | gunjan4527.github.io

PROFESSIONAL SUMMARY

Results-driven Data Analyst skilled in Python, SQL, Excel, and Power BI, specializing in data visualization, business intelligence, financial analytics, and predictive modeling. Experienced in EDA, statistical analysis, machine learning, and Generative AI to build interactive dashboards and KPI reports that drive data-informed decisions.

TECHNICAL SKILLS

- **Programming & Databases:** Python, SQL, R, MySQL, PostgreSQL, SQL Server, SQLite
- **Data Analysis:** Pandas, NumPy, EDA, Data Cleaning, ETL, Data Modeling, Statistical Analysis, Hypothesis Testing
- **Visualization & BI:** Power BI (DAX), Tableau, Data Visualization, Matplotlib, Seaborn, Plotly
- **Analytics:** Financial Analytics, Business Analytics, KPI & Reporting, Forecasting
- **AI/ML & GenAI:** Machine Learning, Scikit-Learn, Regression, Clustering, NLP, TensorFlow, OpenCV, Generative AI, Prompt Engineering, LLM Integration
- **Tools & Platforms:** Advanced Excel (Pivot Tables), Git, Jupyter Notebook, Streamlit, Flask, VS Code

PROFESSIONAL EXPERIENCE

Data Analyst Intern — Yuva Intern

Current

- Clean, transform, and analyze 5+ business datasets using Python and SQL to support data-driven decision-making.
- Design and maintain Power BI dashboards tracking 10+ KPIs for cross-functional stakeholders.
- Automate recurring data extraction and reporting workflows using Python, cutting manual effort by 30%.
- Collaborate with senior analysts to validate data quality and improve accuracy of insights for business teams.
- Document methodology, code, and findings for 5+ analyses to ensure reproducibility and knowledge sharing.

Data Analyst Intern — CodeAlpha

Sep 2026 – Present

- Clean, transform, and analyze 5+ real-world datasets using Python (Pandas, NumPy) and SQL to uncover trends.
- Build 5+ interactive visualizations and dashboards with Matplotlib, Seaborn, and Power BI for stakeholders.
- Perform statistical analysis and hypothesis testing to validate business assumptions across multiple datasets.
- Complete 5+ internship tasks end-to-end, documenting methodology, code, and results on GitHub.
- Present findings and recommendations to mentors, incorporating feedback to improve deliverables.

Data Analyst Intern — Cognifyz Technologies

Sep 2025 – Oct 2025

- Analyzed 9,551+ restaurant records across 15 countries, identifying cuisine trends and pricing strategies.
- Built K-Means clustering with Folium geospatial visualization to identify high-demand expansion locations.
- Developed 4 regression models for rating prediction; Random Forest achieved R^2 of 0.68.
- Found online-delivery restaurants receive 32% higher ratings, informing business strategy recommendations.
- Presented key findings to project stakeholders through structured reports and visual summaries.

EDUCATION

B.Tech – Computer Science & Engineering, World College of Technology & Management, Gurugram (MDU)

2023 – 2027

CERTIFICATIONS

- Data Analytics Job Simulation — Deloitte
- Data Engineer — AWS Training & Certification
- Data Analysis with Python — Cognifyz Technologies
- AI Data Engineering Analyst — NASSCOM (Skill India Hub)

PROJECTS

HR Analytics Dashboard | Python, SQL, Power BI, Scikit-Learn

[GITHUB](#)

- Analyzed 1,470+ employee records to uncover attrition patterns across department, role, and salary band.
- Built Logistic Regression & Random Forest models predicting attrition with 86%+ accuracy.
- Built Power BI dashboard with DAX measures for attrition, headcount, tenure, and salary trends.
- Automated recurring HR reports using Python, cutting manual reporting time by 40%.

Pizza Sales Analysis | SQL, MS SQL Server, Power BI, Excel

[GITHUB](#)

- Cleaned pizza sales data in Excel using pivot tables, removing duplicates and null values.
- Wrote SQL queries (CTEs, window functions) to surface top categories, peak hours, and revenue drivers.
- Built Power BI dashboard visualizing daily revenue, order volumes, and product performance.
- Identified top 3 peak hours driving 45%+ of daily revenue, informing staffing adjustments.

Netflix Movies & TV Shows Analysis | SQL, MySQL, PostgreSQL

[GITHUB](#)

- Analyzed 8,800+ Netflix titles using SQL to explore content trends across genres, countries, and years.
- Wrote complex SQL (CTEs, subqueries, window functions) to compare Movies vs TV Shows and rank top countries.
- Ranked directors and actors by title count using aggregate functions and multi-table joins.
- Analyzed year-wise additions, revealing 60%+ growth in TV Show releases post-2018.

Restaurant Data Analysis | Python, Pandas, Matplotlib, Folium, Scikit-Learn

[GITHUB](#)

- Analyzed 9,551 restaurants across 15 countries; North Indian cuisine led listings at 22.15% share.
- Found online-delivery restaurants rate 32% higher than non-delivery restaurants.
- Built KMeans clustering with Folium geospatial visualization to identify high-demand expansion zones.
- Evaluated 4 regression models for rating prediction; Random Forest achieved best R^2 of 0.68.

Customer Behaviour Analysis | Python, PostgreSQL, Power BI, SQL

[GITHUB](#)

- Analyzed 3,900+ customer records, generating Rs. 1.94 Cr in revenue insights via SQL and Python.
- Found 72.5% of repeat customers were non-subscribers, flagging a high-value upselling opportunity.
- Built Power BI dashboard tracking customer lifecycle, product performance, and discount usage.
- Designed cohort analysis tracking 6+ month retention and key churn indicators.
